Remarks:

Claims 1-7 were cancelled in the parent application without prejudice to presenting them in a continuation application, which is now being done. Also, several of the original independent claims have been presented again, but amended to specifically require the physiological cooling agent to comprise N-2,3-trimethyl-2-isopropyl butanamide. Claims 10, 42, 44-46 and 48 have been canceled. Several dependent claims have been amended to take into account the other changes. Original dependent claim 30, amended during prosecution in the parent application, has been presented in its unamended form, though placed in independent format. Minor typographical errors have also been corrected in several of the claims.

A typographical error in the original declaration was discussed with the Examiner in the parent case during a telephone interview on April 7, 2003. That same error exists in the copy of the declaration submitted herewith. The Examiner indicated that he could waive the error and correct the filing year of PCT/US97/16731 to be September 18, 1997 instead of September 18, 2000 as listed on page 1 of the original declaration. The same waiver of error and correction is requested in the present case.

During a telephone interview in the parent case on April 18, 2003, the fact that the application as filed did not include any drawings was first raised by the Examiner. The specification clearly indicates that drawings were to have been included, but apparently the drawings were inadvertently not included with the application. Applicants' attorney pointed out that the specification incorporates by reference PCT Application Serial No. PCT/US97/16731, filed September 18, 1997, designating the United States, which included the drawings. The attached drawings are taken from that application. Therefore the submission of drawings at the present time does not involve new matter.
